Release Notes for GemBuilder for Smalltalk 7.3.1

GemBuilder for Smalltalk (GBS) version 7.3.1 is a new version of the GemBuilder for Smalltalk product, providing a key bug fix required for running with the latest version of GemStone/S 64 Bit.

These release notes provide changes between the previous version of GBS, version 7.3, and version 7.3.1. If you are upgrading from a version prior to 7.3, please also review the release notes for each intermediate release to see the full set of changes.

This release supports VisualWorks 7.x. It does not support VisualWorks 5i or VA Smalltalk; support for these is provided in separate releases. This release supports both the GemStone/S 64 Bit 2.x product, using the Single-trip interface, and 32-bit GemStone/S, using the Multi-trip interface. It is not usable with versions of GemStone/S 64 Bit earlier than 2.2.5. For details on supported client platforms, see 'Supported Platforms and Versions' below.

To install GemBuilder for Smalltalk 7.3.1, follow the instructions in the *GemBuilder for Smalltalk Installation Guide* for version 7.3.1.

Bugs Fixed

The following bug has been fixed since GemBuilder for Smalltalk version 7.3:

Incorrect handing of stubbed objects with unconnected classes

GemStone/S 64 Bit version 2.4.4 or later only

In some cases with unconnected classes, attempting to unstub a stubbed object may have resulted in the error "Message not understood - instancesAreForwarders". (#40751)

This bug is in the handling of Singletrip traversal results, and only occurs with GemStone/S 64 Bit version 2.4.4 or later. This bug was exposed by the fix in GemStone/S 64 Bit version 2.4.4 for server bug 40703 - Possible hot hang in Singletrip traversal from GBS.
