Version 6.6.4

October 2013

## INTELLECTUAL PROPERTY OWNERSHIP

This documentation is furnished for informational use only and is subject to change without notice. GemTalk Systems, LLC, assumes no responsibility or liability for any errors or inaccuracies that may appear in this documentation.

This documentation, or any part of it, may not be reproduced, displayed, photocopied, transmitted, or otherwise copied in any form or by any means now known or later developed, such as electronic, optical, or mechanical means, without express written authorization from GemTalk Systems.

Warning: This computer program and its documentation are protected by copyright law and international treaties. Any unauthorized copying or distribution of this program, its documentation, or any portion of it, may result in severe civil and criminal penalties, and will be prosecuted under the maximum extent possible under the law.

The software installed in accordance with this documentation is copyrighted and licensed by GemTalk Systems under separate license agreement. This software may only be used pursuant to the terms and conditions of such license agreement. Any other use may be a violation of law.

Use, duplication, or disclosure by the Government is subject to restrictions set forth in the Commercial Software - Restricted Rights clause at 52.227-19 of the Federal Acquisitions Regulations (48 CFR 52.227-19) except that the government agency shall not have the right to disclose this software to support service contractors or their subcontractors without the prior written consent of GemTalk Systems.

This software is provided by GemTalk Systems, LLC and contributors "as is" and any expressed or implied warranties, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose are disclaimed. In no event shall GemTalk Systems, LLC or any contributors be liable for any direct, indirect, incidental, special, exemplary, or consequential damages (including, but not limited to, procurement of substitute goods or services; loss of use, data, or profits; or business interruption) however caused and on any theory of liability, whether in contract, strict liability, or tort (including negligence or otherwise) arising in any way out of the use of this software, even if advised of the possibility of such damage.

## COPYRIGHTS

This software product, its documentation, and its user interface © 1986-2013 GemTalk Systems, LLC. All rights reserved by GemTalk Systems.

## PATENTS

GemStone software is covered by U.S. Patent Number 6,256,637 "Transactional virtual machine architecture", Patent Number 6,360,219 "Object queues with concurrent updating", Patent Number 6,567,905 "Generational garbage collector with persistent object cache", and Patent Number 6,681,226 "Selective pessimistic locking for a concurrently updateable database". GemStone software may also be covered by one or more pending United States patent applications.

## TRADEMARKS

**VMware** is a registered trademark or trademark of VMware, Inc. in the United States and/or other jurisdictions.

**GemStone**, **GemBuilder**, **GemConnect**, and the GemStone logos are trademarks or registered trademarks of GemTalk Systems, LLC, or of VMware, Inc., previously of GemStone Systems, Inc., in the United States and other countries.

**UNIX** is a registered trademark of The Open Group in the United States and other countries.

**Sun**, **Sun Microsystems**, and **Solaris** are trademarks or registered trademarks of Oracle and/or its affiliates. **SPARC** is a registered trademark of SPARC International, Inc.

**HP**, **HP Integrity**, and **HP-UX** are registered trademarks of Hewlett Packard Company.

**Intel**, **Pentium**, and **Itanium** are registered trademarks of Intel Corporation in the United States and other countries.

**Microsoft**, **MS**, **Windows**, **Windows XP**, **Windows 2003**, **Windows 7**, **Windows Vista** and **Windows 2008** are registered trademarks of Microsoft Corporation in the United States and other countries.

**Linux** is a registered trademark of Linus Torvalds and others.

**Red Hat** and all Red Hat-based trademarks and logos are trademarks or registered trademarks of Red Hat, Inc. in the United States and other countries.

**SUSE** is a registered trademark of Novell, Inc. in the United States and other countries.

**AIX**, **POWER5**, **POWER6**, and **POWER7** are trademarks or registered trademarks of International Business Machines Corporation.

**Apple**, **Mac**, **Mac OS**, **Macintosh**, and **Snow Leopard** are trademarks of Apple Inc., in the United States and other countries.

Other company or product names mentioned herein may be trademarks or registered trademarks of their respective owners. Trademark specifications are subject to change without notice. GemTalk Systems cannot attest to the accuracy of all trademark information. Use of a term in this documentation should not be regarded as affecting the validity of any trademark or service mark.

Beaverton, OR 97006

## About This Documentation

These release notes describe changes in the GemStone/S™ version 6.6.4 release. Read these release notes carefully before you begin installation, conversion testing, or development with this release.

No separate Installation Guide is provided with this release. For instructions on installing GemStone/S version 6.6.4, or upgrading or converting from previous products or versions, see the Installation Guide for version 6.6.2.

These documents are also available on the GemStone customer website, as described below.

## Terminology Conventions

The term “GemStone” is used to refer to the server products GemStone/S 64 Bit and GemStone/S, and the GemStone family of products; the GemStone Smalltalk programming language; and may also be used to refer to the company, now GemTalk Systems, previously GemStone Systems, Inc. and a division of VMware, Inc.

## Technical Support

### GemStone Website

**<http://gemtalksystems.com/techsupport>**

GemStone’s Technical Support website provides a variety of resources to help you use GemStone products:

- ▶ **Documentation** for released versions of all GemStone products, in PDF form.
- ▶ **Downloads**, including current and recent versions of GemStone/S products.

- ▶ **Bugnotes**, identifying performance issues or error conditions that you may encounter when using a GemStone product.
- ▶ **TechTips**, providing information and instructions that are not in the documentation.
- ▶ **Compatibility matrices**, listing supported platforms for GemStone product versions.

This material is updated regularly; we recommend checking this site on a regular basis.

## Help Requests

You may need to contact Technical Support directly, if your questions are not answered in the documentation or by other material on the Technical Support site. Technical Support is available to customers with current support contracts.

Requests for technical assistance may be submitted online, by email, or by telephone. We recommend you use telephone contact only for more serious requests that require immediate evaluation, such as a production system down. The support website is the preferred way to contact Technical Support.

**Website:** <http://techsupport.gemtalksystems.com>

**Email:** [techsupport@gemtalksystems.com](mailto:techsupport@gemtalksystems.com)

**Telephone:** (800) 243-4772 or (503) 766-4702

When submitting a request, please include the following information:

- ▶ Your name and company name.
- ▶ The versions of all related GemStone products, and of any other related products, such as client Smalltalk products.
- ▶ The operating system and version you are using.
- ▶ A description of the problem or request.
- ▶ Exact error message(s) received, if any, including log files if appropriate.

Technical Support is available from 8am to 5pm Pacific Time, Monday through Friday, excluding GemTalk holidays.

## 24x7 Emergency Technical Support

GemTalk offers, at an additional charge, 24x7 emergency technical support. This support entitles customers to contact us 24 hours a day, 7 days a week, 365 days a year, for issues impacting a production system. For more details, contact your GemStone account manager.

## Training and Consulting

GemTalk Professional Services provide consulting to help you succeed with GemStone products. Training for GemStone/S is available at your location, and training courses are offered periodically at our offices in Beaverton, Oregon. Contact GemTalk Professional Services for more details or to obtain consulting services.

# *GemStone/S 6.6.4*

## *Release Notes*

### **Overview**

GemStone/S 6.6.4 is a new version of the GemStone/S object server. This release adds a new feature to allow login/logout audit, and includes several bug fixes.

These release notes provide changes between the previous version of GemStone/S, version 6.6.3.3, and version 6.6.4. If you are upgrading from a version prior to 6.6.3.3, review the release notes for each intermediate release to see the full set of changes.

No separate Installation Guide is provided with this release. For installation instructions, use the Installation Guide for version 6.6.2.

### **Supported Platforms and GBS Versions**

#### **Platforms**

GemStone/S version 6.6.4 is supported on the following platforms:

- ▶ Solaris 8, 9 and 10 on SPARC
- ▶ AIX 5.3, 6.1, and 7.1
- ▶ Red Hat Linux ES 5.0, 5.5, and 6.1
- ▶ Windows XP, Windows 2003, Windows 7, and Windows 2008 R2

For more information and detailed requirements for each supported platforms, please refer to the GemStone/S v6.6.2 Installation Guide for that platform.

## GBS version summary

The following versions of GBS are supported with GemStone/S version 6.6.4, with the following client Smalltalk and platforms versions.

### GBS version 7.6

VW 7.9.1	VW 7.9
<ul style="list-style-type: none"> <li>▶ Windows XP, Windows 7, and Windows 2008 R2</li> <li>▶ Solaris 9 and 10 on SPARC</li> <li>▶ RedHat Linux ES 5.0, 5.5, and 6.1</li> </ul>	<ul style="list-style-type: none"> <li>▶ Windows XP, Windows 7, and Windows 2008 R2</li> <li>▶ Solaris 9 and 10 on SPARC</li> <li>▶ RedHat Linux ES 5.0, 5.5, and 6.1</li> </ul>

### GBS version 5.2.7

VA Smalltalk 8.5.2	VA Smalltalk 8.0.2
<ul style="list-style-type: none"> <li>▶ Windows XP, Windows 7, and Windows 2008 R2</li> </ul>	<ul style="list-style-type: none"> <li>▶ Windows XP, Windows 7, and Windows 2008 R2</li> </ul>

## GemConnect

Existing GemConnect shared libraries will not load into GemStone/S version 6.6.4 on Solaris and AIX. On these platforms, please contact GemTalk Technical Support for recompiled libraries. (#43362, #43363)

On other platforms, the existing GemConnect shared libraries can be used.

## Changes in this Release

### Logging of session logins and logouts

A feature has been added to allow automatic recording of each login and logout from the stone (as well as other operations that are related, such as stone startup and shutdown).

This feature is disabled by default. To enable, set the new configuration parameter `STN_LOGIN_LOG_ENABLED` to `TRUE` in the configuration file used by the stone, prior to stone startup.

By default, all sessions that login to the stone will have logins and logouts logged, when enabled in the stone. You can disable logging for specific users by using the new method `UserProfile >> disableLoginLogging`. After this is executed, that `UserProfile` will not have logins or logouts recorded in the log file.

Logins and logouts are recorded to a text file named `stoneName_login.log`, in the same directory as the stone log.

Each log entry is on a line, with the following fields:

```
TimestampString TimeStampSeconds EventKind UserName SessionId  
ProcessId RealUserID EffectiveUserID HostName GemIPAddress  
ClientIPAddress NumCommits
```

These are described in more detail in the next section. For example:

```
"10/03/2013 16:42:48.720" 1380843768 STARTUP Stone 0 15270 631 631  
kata.gemtalksystems.com 204.45.122.94 0.0.0.0 0  
"10/03/2013 16:43:13.017" 1380843793 LOGIN DataCurator 3 15317 631  
631 kata.gemtalksystems.com 204.45.122.94 10.94.141.15 0  
"10/03/2013 16:43:23.488" 1380843803 SHUTDOWN Stone 0 15270 631  
631 kata.gemtalksystems.com 204.45.122.94 0.0.0.0 0
```

## Added Configuration Parameter

### STN\_LOGIN\_LOG\_ENABLED

Enable the logging of all session login and logout events to a separate log file owned by the stone. The file will be named %s\_login.log and will be placed in the same directory as the stone log.

When this feature is enabled, logins and logouts are recorded for all sessions by default. Logging may be disabled for a UserProfile by sending the #disableLoginLogging message to a UserProfile instance and committing the transaction.

The login log file is a text file that contains one line per event. Fields within a line are separated by spaces; the Timestamp String is quoted. The fields logged in each line are:

- ▶ Timestamp String - time in human-readable form
- ▶ Timestamp Seconds - seconds from the epoch (January 1, 1970, 00:00 UTC)
- ▶ Event Kind - one of STARTUP, SHUTDOWN, LOGIN, LOGIN\_FAIL, LOGOUT, or COMMIT\_RESTORE.
- ▶ UserName - the UserProfile's userId, or "Stone" for the stone process.
- ▶ SessionId
- ▶ ProcessId
- ▶ Real UNIX user ID - numeric value; always 0 on Windows.
- ▶ Effective UNIX user ID - numeric value; always 0 on Windows.
- ▶ Host Name - node name where the gem process is running.
- ▶ Gem IP Address - IP Address of the gem.
- ▶ Client IP Address - IP Address of the gem's client.
- ▶ NumCommits - number of commits performed by the session.

STARTUP and SHUTDOWN records are written to indicate when the stone was started and stopped and do not indicate a session login or logout.

Login failures are written for non-exempt sessions that fail a login attempt, usually due to specifying a bad password.

Default: FALSE

## Added methods

The following new methods allow you to manage login/logout logging status for specific UserProfiles, which overrides the status in the stone.

Note that setting this status for a particular UserProfile has no effect if login/logout logging is not enabled in the stone. However, once the logging status is set for a UserProfile, that will remain in effect. If the stone later does have logging enabled, that UserProfile's status will then control logging.

**UserProfile >> disableLoginLogging**

Disables the printing of login/logout events for the receiver to the stone's login log file. This method requires write access to the DataCurator segment and the #OtherPassword privilege.

**UserProfile >> enableLoginLogging**

Enables the printing of login/logout events for the receiver to the stone's login log file, if login logging is enabled in the stone. This method requires write access to the DataCurator segment and the #OtherPassword privilege.

**UserProfile >> hasLoginLogging**

Answer true if the receiver is configured to write login and logout events to the stone's login log file, false otherwise.

## New method to get the host name

The following method has been added:

**System class >> hostname**

Return a String which is the name of the host on which the session is running.

## Objects may fail to be GCed due to stored OOP tracking

Stored OOP tracking may be responsible for the GcGem voting down the entire possible dead set after an garbage collection operation such as MFC or MGC, if the GC session needed to perform a commit to process objects with weak references before the record dead. (#43173)

## Very long hostnames not handled properly

Very long hostnames caused problems in GemStone: they were truncated in glist, and caused errors in VSD. (#43303)

## Statmonitor did not collect disk stats for Linux SAN

Statmonitor did not recognize the disk type commonly used by SAN devices, and did not collect disk stats for these disks. (#42934)

## Socket buffer sizes smaller than OS default

The internal socket buffer sizes were smaller than the OS default. This could impact performance. (#43364)

## Stone startup failure on AIX due to invalid ftok() argument

In a previous release (v6.6), the way the project id argument to ftok() was generated was changed, due to bug 41642. This change involved random generation of a number between 0 and 255. On AIX only, however, 0 is not a valid argument. When 0 happened to be generated on AIX, stone startup failed. (#43246).

In addition, the error message in this case has been improved. (#43246).
