## *2.2.5.3.3 Release Notes*

### *(Special Limited Distribution Release)*

#### **Overview**

GemStone/S 64 Bit 2.2.5.3.3 is a new limited distribution special release version of the GemStone/S 64 Bit object server. This release fixes several bugs in 2.2.5.3.2 that impact system performance. This release is only available for AIX, and GBS support is provided for a limited set of configurations.

These release notes provide changes between the previous version of GemStone/S 64 Bit, version 2.2.5.3.2, and version 2.2.5.3.3. If you are upgrading from a version prior to 2.2.5.3.2, please also review the release notes for each intermediate release to see the full set of changes.

No separate Installation Guide is provided with this release. For installation instructions, use the Installation Guide for version 2.2.5.2.

#### **Supported Platforms and GBS Versions**

##### **Platforms**

GemStone/S 64 Bit version 2.2.5.3.3 is supported on the following platforms:

- ▶ AIX 5.3, TL5, SP3 and AIX 6.1, TL1, SP1

For more information and detailed requirements for each supported platforms, please refer to the GemStone/S 64 Bit v2.2.5.2 Installation Guide for that platform.

## GBS versions

The following versions of GBS are supported with GemStone/S 64 Bit version 2.2.5.3.3.

### GBS version 7.2.2

<b>VW 7.6</b> with 7.6 OE	<b>VW 7.5</b> with 7.5 OE
<ul style="list-style-type: none"> <li>▶ Windows XP and Windows 2003</li> <li>▶ Solaris 10 on x86</li> <li>▶ SuSE Linux ES 10, Red Hat Linux ES 5.0</li> </ul>	<ul style="list-style-type: none"> <li>▶ Windows XP and Windows 2003</li> <li>▶ SuSE Linux ES 10, Red Hat Linux ES 5.0</li> </ul>

For more details on supported platforms and requirements, see the release notes for that version of GBS.

## Changes in this release

### Long running Write-Set union sweeps

Under some circumstances, long running gems may have stale objects in the pom\_gen memory space. As a result, during the voting on possible dead following mark/sweep, they may vote down many objects from the possible dead set, causing the write set union sweep to take unnecessarily long.

To avoid this, the configuration parameter `GEM_TEMPOBJ_POMGEN_PRUNE_ON_VOTE` has been added. This controls how aggressively the gem will remove old POM objects from pom\_gen prior to voting.

#### Added configuration parameter

##### `GEM_TEMPOBJ_POMGEN_PRUNE_ON_VOTE`

The percent of the pom generation area to be thrown away when voting on possible dead objects. Only subspaces of pom generation older than 5 minutes are thrown away. The most recently used subspace is never thrown away.

If this value is not specified, or the specified value is out of range, the default is used.

Default: 50

Minimum: 0

Maximum: 90

#### Added Cache Statistic

##### `GcWsUnionSize` (Stone)

Number of objects in the write set union used to finalize possible dead objects. All objects in the WSU must be scanned to determine if any objects reference one or more possible dead objects.

##### `EpochLastDuration` (Stone)

Duration of the last completed epoch garbage collection operation in seconds.

## **Dead object reclaim may have stopped**

Under certain circumstances, the Reclaim GcGems could stop reclaiming dead objects. (#41634)

## **GcGems deleted log files with #verboseLogging**

When the GcUser parameter #verboseLogging is true, the GcGems were incorrectly deleting their log files. Now, when this parameter is set, the deletion of GcGem log files is suppressed. (#41829)
